

One partner, all the brains you need

Training

Improving your performance

The training courses offered by Kinesis Pharma have been developed as a spin-off from hands-on drug development experiences with both start-up and international established companies developing small molecules, biologics, herbals or nutraceuticals.

The team of trainers consists of drug development experts active in the fields of regulatory affairs, clinical development, non-clinical development, CMC (Chemical Manufacturing and Control) and Quality Assurance (GMP, GLP, GCP). They are on top of trends in drug development and therefore very capable in transferring the state of the art knowledge.

What Kinesis offers

The following courses are available:

- **Drug Development Course**

This course will provide the participant a thorough overview of the now-a-days complete drug development process. This process is complex and requires experts from various disciplines to steer the compound through the various stages of development. Coordinating the various multidisciplinary activities from one milestone to the next, adhering to timelines and budget restraints and dealing with complex regulations is a challenge for each member of the project team especially within a global environment. The training can be delivered as modules in a set of trainings or as two-day training for a certain group of professionals (tailored for a company, region, background or role).

- **Early Stage Clinical Development Training**

The objective of this course is to give an introduction in the science and strategic thinking of early stage (Phase I and IIa)

clinical development and at the same time provide you with practical tools to manage early stage clinical trials. This training has been set up as a two-day course for (new) early phase trial managers and for everyone interacting with others in early phase clinical development.

- **Chemistry, Manufacturing and Control for Biologics**

The scope of this course is to give an overview on CMC development of biologics and regulatory expectations; to manage CMC issues in practice and align CMC activities with overall development strategy. It covers antibodies, proteins, vaccines, advanced products in both early and full development stages. This 4-day course consists of specific presentations supplemented with case studies and exercises for developing strategic CMC development skills. This training is targeted to CMC professionals with 2-5 years of experience in analytical development, process development, formulation development or stability studies.

- **Development of Herbal Products**

The objective of this course is to give an overview of the pharmaceutical development of herbal products and to provide basic principles on herbal medicinal product regulations in the EU and the US. The course also explains the implications of a Good Manufacturing Practice inspection. This one day training course is targeted for everybody involved in the development of herbal products and in need of an overview for possibilities of marketing and registration.

- **Introduction to Clinical Pharmacokinetics**

The objective of this 3-day course is to provide a general understanding of the principles of pharmacokinetics and its role in drug development. On completion of this course you will be familiar with pharmacokinetic concepts and the underlying physiological processes. You will be able to effectively interpret pharmacokinetic information and put it in the context of drug development. The course is intended for everyone who is interested in pharmacokinetics, either because they started a career in drug development or in pharmacokinetics, or interact regularly with others working in pharmacokinetics.

- **Tailor-made training**

In addition to the courses described above, Kinesis also offers tailor-made training in the field of drug development, thereby combining the newest insights with practical hands-on training. This combination of theory with practice helps you to transfer knowledge from the training to the workplace. The content of the training is flexible and existing material can be adapted or new training can be developed. And of course training content is being updated, whenever required by new guidelines or experiences. Kinesis tailors training to the requested level and offers both introduction training for newcomers as in-depth training for professionals. The training location can be the Kinesis office in Breda, the Netherlands or at a location of your choice to provide in-house training. Please check our website: www.kinesis-pharma.com/training.html for the most recent update on training options.

Key achievements

- Developed and conducted valued training in drug development and all its facets
- Completed successful projects in collaboration with partners specialized in training
- Trained many professionals worldwide
- Delivered training at big pharma and at pharmaceutical training consortia
- Developed and delivered several internal staff trainings

Why Kinesis Pharma?

- Experienced team of trainers, consisting of experienced drug development consultants
- Broad experience in conducting training
- Knowledge and skills continuously updated with current projects in pharma and biotechnology, and new guidelines/regulations.
- Experience gained in industry and with regulatory authorities
- Detailed experience of good practice (GxP) quality systems
- Committed to sponsors' projects and timelines
- Flexible approach
- Independent organization
